COVID-19 PREVENTION: ENHANCED CLEANING AND DISINFECTION PROTOCOLS

June 04, 2020

In alignment with public health recommendations, the University is taking measures to prevent community spread of COVID-19, which includes undertaking enhanced cleaning and disinfection procedures. The Environmental Health & Safety Department (EH&S) developed enhanced cleaning and disinfection procedures for University units to follow during the COVID-19 public health situation.

1. Enhanced cleaning and disinfection for prevention

2. Enhanced cleaning and disinfection after notification of a confirmed case of COVID-19

1. ENHANCED CLEANING FOR PREVENTION

A. General guidance:

i. Increase the frequency of cleaning and disinfecting, focusing on high-touch surfaces, such as residence hall communal rooms, public restrooms, exercise rooms, library tables, buttons, handrails, tables, faucets, doorknobs, shared toys, and shared keyboards. Increased frequency of cleaning and disinfecting with attention to these areas helps remove bacteria and viruses, including the novel coronavirus.

ii. Practice good hand hygiene after cleaning (and always!):
   - Wash hands often with soap and warm water for at least 20 seconds.
   - If soap and warm water are not readily available, use an alcohol-based hand sanitizer that contains at least 60% alcohol.

B. Safety guidelines during cleaning and disinfection:

i. Wear disposable gloves when cleaning and disinfecting. Gloves should be discarded after each use. Clean hands immediately after gloves are removed.

ii. Wear eye protection when there is a potential for splash or splatter to the face.

iii. Gowns or aprons are recommended to protect personal clothing.

iv. Store chemicals in labeled, closed containers. Keep them in a secure area away from children and food. Store them in a manner that prevents tipping or spilling.
C. Cleaning and disinfection of surfaces:

i. Clean surfaces and objects that are visibly soiled first step in disinfection process. If surfaces are dirty to sight or touch, they should be cleaned using a detergent or soap and water prior to disinfection.

ii. Clean and disinfect surfaces as soon as possible in areas where a person with respiratory symptoms (e.g., coughing, sneezing) was present.

iii. Use an EPA-registered disinfectant for use against the novel coronavirus. Refer to the list of products pre-approved for use against emerging enveloped viral pathogens, or the list of disinfectants for use against SARS-CoV-2.

iv. Follow the manufacturer’s instructions for safe and effective use of all cleaning and disinfection products (e.g., dilution concentration, application method and contact time, required ventilation, and use of personal protective equipment). The disinfectant concentrations and contact time are critical for effective surfaces disinfection. Ensure that disinfectants are prepared (well-ventilated areas) and handled safety, wearing the appropriate PPE to avoid chemical exposures. Review the COVID-19 Chemical Disinfectant Safety Information guide to potential health hazards and the recommended protective measures for common active disinfectant agents.

v. Consult manufacturer recommendations on cleaning products appropriate for electronics. If no guidance is available, consider the use of alcohol-based wipes or spray containing at least 70% alcohol. Use of alcohol-based products may reduce risk of damage to sensitive machine components. Whenever possible, consider using wipeable covers for electronics. Dry surfaces thoroughly to avoid pooling of liquids.

vi. The following products are effective for disinfection of hard, non-porous surfaces:

- A 10% diluted bleach solution, an alcohol solution with at least 70% alcohol, and/or an EPA-registered disinfectant for use against COVID-19.

- Prepare a 10% diluted bleach solution by doing the following:
  - Mix five tablespoons of bleach per gallon of water.
  - After application, allow 2 minutes of contact time before wiping, or allow to air dry (without wiping).

vii. For soft (porous) surfaces such as carpeted floor, rugs, and drapes:
• Remove visible contamination (if present) and clean with appropriate cleaners indicated for use on these surfaces.

• After cleaning, launder items (as appropriate) in accordance with the manufacturer's instructions. If possible, launder items using the warmest appropriate water setting for the items and dry items completely.

• If laundering is not possible, use an EPA-registered disinfectant for use against COVID-19. Refer to the list of products pre-approved for use against emerging enveloped viral pathogens, or the list of disinfectants for use against SARS-CoV-2.

viii. If a COVID-19 case is confirmed in the UW community, University units are required to follow the guidance Enhanced Cleaning and Disinfection after Notification of a Confirmed Case of COVID-19 outlined in this document.

2. ENHANCED CLEANING AND DISINFECTION AFTER NOTIFICATION OF A CONFIRMED CASE OF COVID-19

This protocol is for cleaning and disinfection of areas where a person with COVID-19 spent time in University spaces. It is applied from 48 hours prior to the onset of symptoms until seven days have passed since the person was present in a University space.

After notification of a person with confirmed COVID-19 on a UW campus, the following cleaning and disinfecting protocol will be followed:

A. Buildings and/or specific rooms and areas where a COVID-19 positive person spent time will be assessed on a case-by-case basis. The cleaning scope will be implemented based on the risk of potential contamination as determined by the Environmental Health & Safety Department (EH&S) and the Advisory Committee on Communicable Diseases, in coordination with the impacted department, UW Facilities, and Housing and Food Services.

B. EH&S staff will do the following (as applicable):
   i. Communicate in writing the scope of cleaning to UW Facilities or other department responsible for cleaning.
   ii. Identify areas that require restricted access during and immediately following enhanced cleaning.
   iii. Communicate with impacted department(s).
   iv. Coordinate with building coordinators/managers.

C. When cleaning and disinfecting rooms with increased surface area due to a large numbers of desks, tables, and other furniture, and where a spray
application of disinfectant is needed, EH&S will notify the building coordinator in advance if the spraying will occur during normal work hours. Advance notice allows the building occupants to be apprised of the schedule for disinfection of the space and any areas that may require restricted access during cleaning.

**D. The cleaning crew will:**

i. Follow the *Enhanced Cleaning for Prevention* guidance outlined in this document.

ii. Open windows to the outside to increase air circulation, if possible.

iii. If possible, wait 24 hours after a person with COVID-19 was present in a space prior to beginning cleaning and disinfection.

   i. If it is not possible to wait 24 hours, the cleaning crew should increase the level of PPE used while cleaning and disinfecting, including using a N95 filtering facepiece respirator, elastomeric half-face air purifying respirator with particulate filters, or a powered air-purifying respirator with particulate filters.¹

   iv. If an outside contractor is used for cleaning and disinfection, the proposed scope of work, including the products and their respective safety data sheets (SDSs), and application methods must be reviewed by EH&S prior to work commencing.

**E. Wear the required personal protective equipment (PPE) during cleaning and disinfecting:**

i. Disposable gloves, gowns or a lab coat to protect contamination of clothing

ii. Safety glasses/goggles when there is a potential for splashing/spraying the disinfectant

iii. If entering the space less than 24 hours after the ill person was present, the cleaning crew should wear one of the following respirators: N95 filtering facepiece respirator, elastomeric half-face air purifying respirator with particulate filters, or a powered air-purifying respirator with particulate filters.¹

   iv. All staff must be fully trained on donning and doffing required PPE to prevent cross contamination.

**F. Review the [COVID-19 Chemical Disinfectant Safety Information](https://www.ehs.washington.edu) guide to potential health hazards and the recommended protective measures for common active disinfectant agents.**
1UW employees who wear respirators as a job requirement must be medically cleared, trained, and fit tested, as outlined in the EH&S Respiratory Protection Program and in compliance with WAC 296-842 Respirators.
