**Laboratory Glass and Plasticware Waste**

- Micropipette tips
- Serological pipettes
- Syringes without needles
- Test tubes, swabs and sticks
- Any contaminated item that is not a regulated sharp but could puncture a biohazard bag

**Sharps Waste**

- Needles, syringes with needles, IV tubing with needles attached, lancets, scalpel blades are always sharps waste;
- If contaminated with biohazards (including recombinant or synthetic DNA/RNA), broken glass, razor blades, fragile glass items like tubing, vials, ampoules and Pasteur pipettes, glass slides and cover slips are sharps waste.

**Human Pathological Waste**

- Human tissues and anatomical parts that originated from a UW source (surgery, obstetrical procedures, autopsy, teaching and research laboratories) (If not from a UW source, follow the supplier's instructions.)
