**SHARPS WASTE**

**BIOHAZARDOUS SHARPS WASTE**

- Sharps contaminated with biohazards (including recombinant DNA/RNA)
- Non-contaminated sharps including needles, syringes, lancets, and scalpel blades

Biohazardous sharps can be autoclaved on-site or collected for off-site treatment. See Biohazardous Waste at [www.ehs.washington.edu](http://www.ehs.washington.edu) for treatment and disposal information.

**TRACE CHEMO SHARPS WASTE**

- Empty chemo/hazardous drug containers (<3% of original quantity)
- Sharps contaminated with trace amounts of chemo/hazardous drug
- Sharps contaminated with trace chemo/hazardous drug and biohazards

Trace chemo waste is collected for off-site incineration. EH&S training and account setup required. Visit [www.ehs.washington.edu](http://www.ehs.washington.edu) for details.
